HackTheBox Profile

PROFESSIONAL SUMMARY

Passionate and self-driven **Cybersecurity Engineer** with a strong focus on **web application penetration testing, network security, and Active Directory exploitation**. Dedicated to continuous learning through hands-on practice on platforms such as **Hack The Box, PortSwigger Academy, and PentesterLab**. Skilled in identifying and exploiting vulnerabilities, simulating real-world attack scenarios, and documenting detailed **write-ups and methodologies** to enhance knowledge sharing and team learning. Eager to contribute technical expertise and creative problem-solving skills to strengthen organizational security and red teaming operations.

KEY SKILLS

Network Penetration Testing

- Performed internal network reconnaissance, identifying active hosts, services, and communication paths across enterprise-like environments.
- Analyzed exposed services (SMB, LDAP, RDP, WinRM, HTTP) to understand attack surface and misconfigurations.
- Documented network enumeration findings to support attack-path analysis and guide further assessment steps.

Active Directory Attacks & Enumeration

- AD enumeration: users, groups, computers, ACLs, trust relationships
- Kerberos analysis: SPNs, ticket workflows, authentication policies
- Detection of AD misconfigurations affecting authentication and access control
- Privilege path mapping and lateral movement exposure (identity relationships)

Privilege Escalation

- Performed Windows and Linux privilege escalation using misconfigurations, unquoted service paths, SUID binaries, and kernel exploits in simulated lab environments.
- Familiar with enumeration frameworks like winPEAS, linPEAS,PrivescCheck, and manual enumeration techniques for high-OPSEC post-exploitation.

Web Application Testing

- Experienced in identifying and exploiting OWASP Top 10 vulnerabilities (XSS, SQLi, IDOR, CSRF, SSRF).
- API Security (REST, GraphQL)
- OWASP API Security Top 10
- Skilled in black-box and gray-box testing using tools like **Burp Suite**

Vulnerability Assessment

Proficient with scanning and assessment tools including **Nmap**, **Nessus**, and **OpenVAS**.

TECHNICAL PROFICIENCIES

- Operating Systems: Windows, Linux
- Frameworks: OWASP Top 10, MITRE ATT&CK
- Penetration Testing Tools: Burp Suite, Metasploit, Nmap, Nessus, OpenVAS
- Active Directory

INDEPENDENT COURSEWARE

OSCP (Offensive Security Certified Professional)

CRTP (Certified Red Team Professional)

HTB Certified Web Exploitation Specialist (HTB CWES)

HTB Certified Penetration Testing Specialist (HTB CPTS)

eCPPT (eLearnSecurity Certified Professional Penetration Tester)

eWPT (eLearnSecurity Web Application Penetration Tester)

CRTE(Certified Red Team Expert)

EDUCATION

2021 – 2025 **Bachelor of Management Information Systems**
Delta Institute

LANGUAGES

- English
- Arabic
